

***LogMyData® Data Manager
Remote Monitoring for LonWorks®***

Applications Include

- Alarm Monitoring for Power Backup Systems*
- Alarm Monitoring for Compressors, Air Handlers, all HVAC Equipment*
- Preventive Maintenance - Automatic Notifications of Maintenance Due*
- Utility Usage Logging*
- Performance Analysis, Cycle Time Tracking*

LogMyData Data Manager Model DM2-LON is a web enabled device that automatically communicates with one or more LonWorks devices to obtain data. This data is constantly checked against user set thresholds to see if an alarm condition exists. If there is an alarm condition, the DM2-LON immediately sends an event notification to the server (e.g. LogMyData.com). If there are no alarms, the DM2-LON will simply provide periodic reports of data points to the server.

The DM2-LON uses unbound polling to query the LonWorks devices that have been attached to the DM2-LON. The DM2-LON includes its own device manager enabling DM2-LON to monitor LonWorks devices without any external network management. However, DM2-LON will peacefully co-exist on managed networks as well.

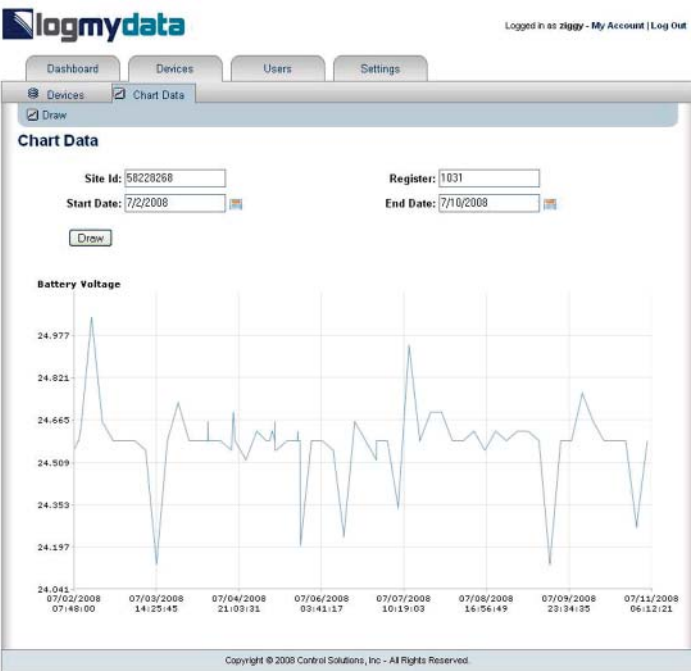

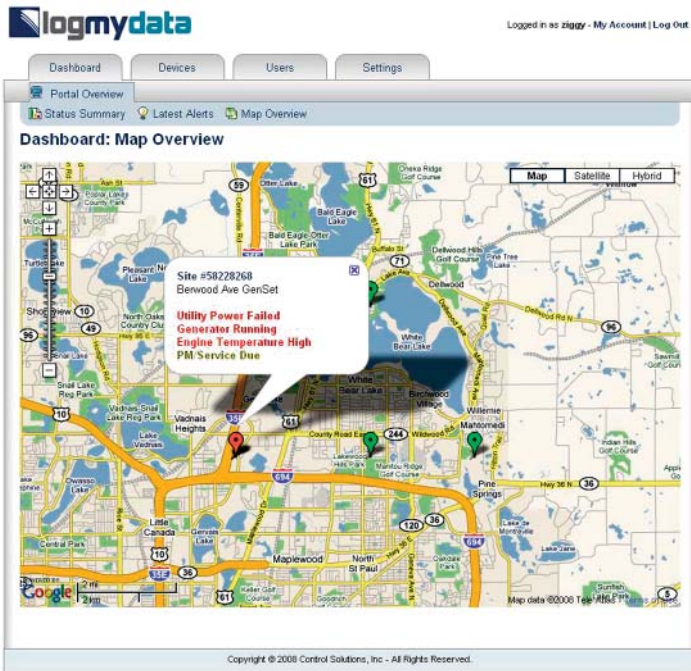

FEATURES

- Access any LonWorks SNVT via Web Portal
- User programmable threshold rules for alarm notifications
- DM2-LON includes its own device manager
- Network variables are polled without binding
- XIF imported directly from devices (except structured NV's)
- XIF converted from file, including structured SNVT's
- XIF to CSV conversion for configuration of UNVT's
- TP/FT-10 (Free Topology) LonWorks network
- 10/100BaseT Ethernet for Modbus TCP, Internet
- Powered by 10-30VDC or 12-24VAC 50/60 Hz
- Power Consumption: 0.1A @ 24VDC
- DIN rail mounting, 100mm H x 70mm W x 60mm D
- Pluggable screw terminal block for power & RTU network
- Operating temperature -40°C to +85°C; Humidity 5% to 90%

The DM2-LON is designed especially for web servers like the LogMyData.com web portal. For more information about the web portal available to you immediately with the DM2-LON, visit www.logmydata.com.
